Meeting assets for DBMS iTC status call - 2026 are ready!

Meeting summary

Quick recap

The meeting focused on updates from the CCUF conference and progress on cloud and crypto modules. Brandon reported presenting on marketing and cloud modules, particularly the service model, to 80-100 attendees who asked four questions, and received positive feedback on the review set structure. Maureen noted that ITC updates had low attendance with only 50-minute sessions and minimal questions from attendees. The team discussed challenges with NIAP updates to the CC portal and decided to proceed with publishing the crypto and cloud modules for public review while postponing the database as a service module. Brandon mentioned ongoing work on translating their CPP into NIAP XML format using AI tools to potentially expedite the review process. The next meeting was scheduled for December 7th, with Maureen noting she would be away after December 9th.

Next steps

Brandon

- Address Anders' comments on the crypto and cloud modules and push out updates.
- Announce public review for the crypto and cloud modules, and hold off on the database as a service module for now.
- Consider providing NIAP with an XML version of the CPP to expedite their review process.

Maureen

- Check with NIAP (possibly Matt) about updating the CC Portal with the new information, especially once the modules are ready for public review.
- Change the next meeting date from November 30th to December 7th and cancel the December 30th meeting.

Summary

Cloud Module Presentation Updates

Brandon reported on his successful presentations at CCUF and ICCC conferences, where he discussed the transition to CC 2022, cloud modules, and service models, receiving positive feedback and multiple questions from attendees. Maureen noted that the ITC updates session had low attendance with mostly scheme representatives present, and mentioned challenges in getting NIAMP to update their information on the CC portal despite multiple requests. Both discussed plans to prepare the cloud and crypto module for public review, with Maureen considering reaching out to Matt if portal updates are not received.

NIAP PP Configuration Review Discussion

Brandon discussed his conversation with NIAP about reviewing new PP configurations for PCL approval. While NIAP did not commit to a specific timeline, they provided verbal acknowledgment that they would review the modules. Brandon noted that the crypto package is sourced from the CCDB catalog and included most of the catalog to ensure compliance across both NIAP and the EU market.

AI Implementation Framework Discussion

Brandon reported that while many people are discussing AI transformation, there are limited concrete proposals for implementation. He mentioned two specific initiatives: Sean Geddes with Catalyst working on machine-readable specifications for documents and evidence, and Ashidwara's new startup developing AI-driven test harnesses. Brandon expressed his opinion that the Common Criteria framework could be adapted to evaluate AI infrastructure, particularly regarding model hosting, multi-tenancy sandboxing, and agent sandboxing, though he noted this approach hasn't been widely considered yet.

Crypto and Cloud Module Updates

Brandon discussed updates to the crypto and cloud module based on Anders' comments, with plans to address them and push out updates. Anders mentioned he had not reviewed the database as a service module, which Brandon identified as containing novel approaches for creating assurance activities with different control plane access types. The conversation ended mid-sentence as Maureen began to address priorities.

Crypto and Cloud Module Publishing

The team discussed moving forward with publishing the crypto and cloud modules for public review, while postponing the database as a service module. Brandon expressed confidence in publishing the current versions even if not fully polished, as he believed the modules were fundamentally sound. Maureen suggested starting with just the crypto module to begin the NIAP review process, and Brandon agreed to this approach, noting that the database module was now in the refinement phase rather than requiring major edits.

CCDB and NIAP Process Updates

Brandon explained that Matt Downey served as the CCDB representative at the conference while Angela was absent, though Matt was unable to bring new business. The team discussed priorities including addressing Anders' comments, submitting documents for public review, and eventually working with NIAP for validation and potential inclusion in their database. Brandon mentioned a side effort to use Codex to translate their CPP into NIAP XML format to potentially expedite the review process, though this work had been paused for several months.

Meeting Schedule Adjustment Discussion

The team confirmed the next meeting will be held on December 7th instead of November 30th, as Maureen will be traveling after December 9th. Maureen noted there has been limited activity on the CC Portal recently, possibly due to resource constraints. The group agreed to cancel the December 30th meeting and will reconvene in five weeks on December 7th.

Attendees: Maureen Barry (Organizer), Gaya Chandran (External), sean (External), Andrea Lerdell (External), Brandon Harvey, Anders Staaf (External)
